**The World's First
Movable and
Flushable Toilet**

- 1 Bowl Separates and Rolls out of Bathroom**
- 2 Used Outside of Bathroom where Patient is Located**
- 3 Finally Returns to Bathroom for Flushing Waste**

About MOVABOWL®

MOVABOWL® is the world's first movable and flushable toilet. The main benefits of this innovation is that it makes it easier for people with disabilities to use the toilet and it also makes it easier for nurses to take care of people with disabilities. This unique design allows the toilet bowl to travel out of the bathroom to where the disabled person is located. Then the mobile toilet bowl is used in a location outside of the bathroom. Finally, the mobile toilet bowl returns to the docking station in the bathroom and can be flushed. With this process, the handling of waste is eliminated. In most cases, nurses no longer have to sterilize commode chairs, sterilize bed pans, and change diapers. In addition to the convenience of bringing the toilet next to the disabled person, the use of this innovation is a more pleasant experience for the user because it feels just like a standard toilet and has water in the bowl.

MOVABOWL® will also dramatically reduce the amount of falls that many people with mobility issues suffer from every year. The US population is now 318 million. Approximately 25% of the population are senior citizens; becoming disabled due to age.

Approximately 30% of adults are suffering from obesity; excessive weight damaging knees, feet, and hip joints that cause disability. Approximately 25% of the population is Diabetic; causing amputations of feet and legs. Diabetes also causes severe pain in the feet nerves. With a population that has a high

percentage of elderly, obese and diabetic members, there will be many people that will be suffering from walking problems, knee problems, hip problems, strokes, heart attacks, etc. All these problems create physical disabilities and mobility issues; thus making it difficult to get to the bathroom and use the toilet.
